### **DETAILED ACTION**

This application filed July 31, 2001, claims benefit to provisional application 60/254,551, filed December 12, 2000.

Claims 1-20 are pending and currently under examination.

#### ***Election/Restriction***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9, drawn to a method of producing pluripotent stem cells from adult somatic cells, classified in class 435, subclass 325.
- II. Claims 10-19, drawn to a method of treating a human subject suffering from a degenerative disease comprising administering a composition of pluripotent stem cells to the subject, classified in class 424, subclass 93.21
- III. Claim 20, drawn to a method of producing an organ ex vivo comprising culturing pluripotent stem cells on an engineered surface, classified in class 435, subclass 1.1 and class 435, subclass 288.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I-III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case each of the

Art Unit: 1632

inventions are drawn to different and unique methods. Each of the methods require different method steps and specific types of materials to practice, and would result in materially different outcomes as set forth in the preamble of the claims. Group I could be used to generate pluripotent stem cells for use in the methods of groups of II and III, however alternative methods are known in the art for the isolation of pluripotent stem cells which could be used in these methods. Though each of the methods encompass the generation or use of pluripotent stem cells, each of the methods requires a separate search and consideration as far as they are directed to practicing the particular method claimed.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any

Art Unit: 1632

amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
